

**“SUPER ST-1” VALVE LUBRICANT,
TANK and PLUMBING SAVER
DELUXE MECHANICS HELPER**

“SUPER ST-1” VALVE LUBRICANT, TANK and PLUMBING SAVER is specially formulated to help prevent sticky apparatus valves caused by lime and other water impurities from building up on the ball and seat assemblies. When valves are not operated on a regular basis the water impurities start to attach to the valve assemblies making them operate hard or not at all. Another major problem is caused by water impurities is the sluggish or improper operation of relief valve and transfer valves. After the use of **“SUPER ST-1” VALVE LUBRICANT, TANK and PLUMBING SAVER** the valves operate freely and reaction time will be within manufactures specifications.

When discharge, suction, relief and transfer valves do not operate properly or do not operate at all this becomes a **safety issue** that could cause firefighter injury, loss of property or lose of life.

Regular usage of **“SUPER ST-1” VALVE LUBRICANT, TANK and PLUMBING SAVER** will help suction and discharge valves operate smoother and easier as well as **reduce the need for costly repairs**. This is also true for the relief valve and changeover valve systems.

“SUPER ST-1” VALVE LUBRICANT, TANK and PLUMBING SAVER helps prevent steel tanks from rusting out from the water impurities, newer apparatus may have composite type tanks that will not rust however the pump housing and some plumbing still will.

“SUPER ST-1” VALVE LUBRICANT TANK and PLUMBING SAVER has been marketed since 1978.

“SUPER ST-1” VALVE LUBRICANT has been specially formulated for the following:

Lubricate Pump Valves and Seals • Free Up Transfer Valves

Free Up Relief Valves

Helps Prevent Lime Build Up On Valves

Helps Prevent Costly Service Repairs

Designed For High and Low Usage Apparatus

Bio-Degradable • Non-Toxic • Non-Corrosive

**WILL NOT HARM VALVE SEALS OR SEATS,
IMPELLER SHAFTS, PACKINGS OR O-RINGS**

Will not become gummy or separate

“OUT OF SERVICE APPARATUS COST EVERYONE”
