

NEW PRODUCT from

4010-3 FOAM-FAST™ ¾" GHT Foam Applicator

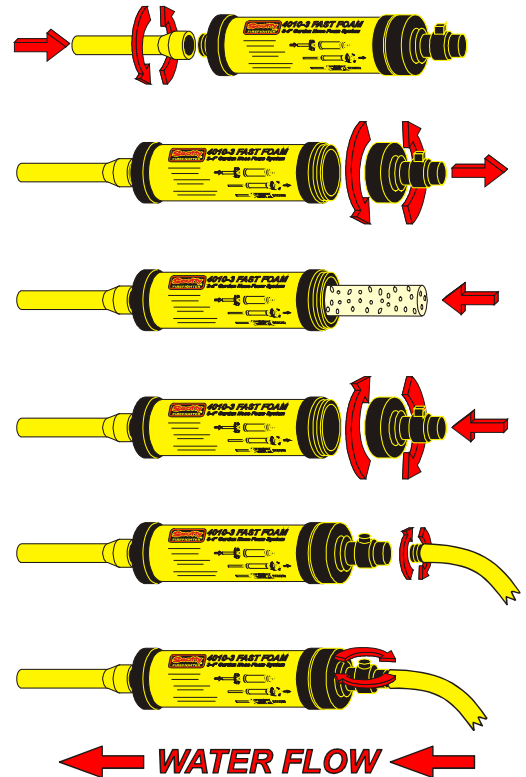

The Scotty 4010-3 Foam-Fast™ is the most simple and effective method of deploying a foam surfactant/wetting agent suitable for Class A fire scenes from a ¾" garden hose. Professional firefighters use foam surfactants in their water to lower the water's surface tension, allowing it to spread and penetrate much more efficiently. When connected to a ¾" garden hose, the 4010-3 Foam-Fast™ works by diluting a solid foam cartridge in the water flow. The foam/water solution then passes through

an air-aspirating foam nozzle producing foam suitable for Class A fires. Each 4010-3 Foam-Fast™ unit comes with a 3 gpm Nozzle, the Mixing Chamber and a ¾" Garden Hose Quick Connect with Shut-Off. Scotty Class A Foam Cartridges are sold separately, use stock code 4010CART6 (Two Packages of 3 cartridges). Each 6" long foam cartridge will last up to one hour. The foam cartridges are 100% biodegradable and contain no toxic materials.

4010-3 Foam-Fast

To operate the 4010-3, simply unscrew the inlet side of the mixing chamber, insert a foam cartridge (remove outer paper tube), re-thread the inlet end cap, attach to a ¾" garden hose and spray foam. The 4010-3 will flow water at a rate of 3 gpm (12 Lt./m) when attached to a standard ¾" garden hose line. The Foam-Fast™ is recommended for use with water pressures between 35 psi and 85 psi (the higher the pressure, the greater the reach of stream).

Each foam cartridge lasts up to 1 hour!
(Foam Cartridges Sold Separately)
