NOVA-EU6500

The most powerful, yet portable Lighting System available to emergency personnel.

The NOVA-EU6500 is the newest option that adds a lighting system to your existing EU6500isA Honda Generator. Or you can order your NOVA-EU6500 with a Honda EU6500isA as a package.

Often the first thing you really need at an emergency scene is lighting. The Tele-Lite NOVA-EU6500 instantly turns your generator into a lighting system with two telescoping quartz halogen lights extending to a height of 10 feet, directing the light right where you need it.

The 500 watt fixtures are standard but there are options for 750, 1000 or 1500 watt fixtures in either 120 or 240 volts. All the flexibility of the Tele-Lite line of lamphoods

let you build a NOVA-EU6500 to suit your needs.

With nearly 5 hours of run time and 6500 watts output you cannot want for power or ability. This is the rig for the pros who want to go with more power. For all the functionality of the NOVA-EU6500 it only adds 13% additional weight to the EU6500 generator.

EASY ON AND EASY OFF
The 4-point mounting and one locking lever allow quick, solid attachment to a EU6500. Removing the NOVA-EU6500 enables convenient storage.

You're one snap away from a portable lighting system, without a snake's nest of cords to get snagged on. Should you prefer to permanently mount the NOVA-EU6500, a kit is provided.

Your Honda Generator is a key part of your emergency equipment. Make it even more useful with the NOVA-EU6500 Light System option.

For optimum performance and safety, please read the owner's manual before operating your Honda Power Equipment. Connection of generators to house power requires transfer device to avoid possible injury to power company personnel. Consult a qualified electrician.
